

Saad Ali

Machine Learning & AI Engineering Intern @ FlyRank

Email: saadali880@gmail.com | GitHub: github.com/Saadali880 | LinkedIn: linkedin.com/in/saadali

Professional Summary

Results-driven Machine Learning & AI Engineering Intern with experience designing, optimizing, and validating empirical ML pipelines. Proven track record of handling high-volume search performance data and meeting strict production latency limits. Passionate about bridging the gap between rigorous model evaluation and zero-latency user experiences.

Work Experience

Machine Learning & AI Engineering Intern

June 2026 – Present

FlyRank AI (Search-Priority Engineering Group)

Remote

- Developed and deployed the **Content Refresh Opportunity Scorer**, an empirical ML pipeline trained on 79M+ rows of search performance data using DuckDB, Pandas, and Scikit-Learn.
- Achieved a **+247% Lift in Precision@50** to accurately predict search traffic decay and prioritize refreshes.
- Optimized the inference pipeline to run within a strict **14ms latency limit** for high-volume production use.
- Designed clear telemetry logging and validation audits to help engineering leads understand model successes and failures.

Key Projects

Search Telemetry Sparsity Optimizer

August 2026 (Planned)

- Applying Bayesian smoothing to pages with impressions under 250 to prevent false-positive content refresh recommendations in low-volume search niches.

WebAssembly-based Browser-Side Inference Pipeline

September 2026 (Planned)

- Prototyping browser-side deployment of Logistic Regression models using DuckDB WASM to calculate traffic decay risk scores directly in the client dashboard.

Technical Skills

Machine Learning & Data: Scikit-Learn, DuckDB, Pandas, NumPy, Matplotlib, SQL, Bayesian Estimation

Software & Systems: Python, JavaScript (ES6+), HTML5/CSS3, Git, GitHub Actions, Netlify, Docker

Education

Bachelor of Science in Computer Science

Specialization in Artificial Intelligence and Machine Learning

Expected Graduation: 2027
